

wimusic

WiMusic makes it possible to stream music in realtime from your laptop or pc to your stereo over wireless network. the receiver is a small board connected to the amplifier.

the pulseaudio software is being used for streaming, which allows to use the most commonly used linux-media-players like xine, rhythmbox or songbird for playback.

the hardware connected to the stereo is a beagle board. it has an omap3530 arm processor and runs angstrom linux.
