# HOCHSCHULE DER MEDIEN

Fun with faces

Face2Face

fake history now!

Using Apples latest Portrait-Lighting technologie with the new iPhone generation you can extract your face and select a new background.
Face2Face enables you to be more creative by helping you select the best fitting face for the selected background and place it there realistically.

Design

The app design follows Apples Design guide lines to ensure an Experience that Face2Face Users are already used to and love.

iOS App

Since Apples Portrait Lighting API is crucial for the main functionality of Face2Face an implementation would be limited to the iPhone 8 Plus and iPhone X for now. There is no alternative for Android available so far. Even googles recently launched access to the Visual Core with Android 8.1 does not provide similar functionality.

Technologies

We used the prototyping-tool Sketch. Animations were done with Flinto, Photoshop, Illustrator and InDesign were also used.

About Us

- Three students in Semester 7 and 8
- The whole team is studying mobile media

Features

- Create different profiles for you and your friends
- Replace faces in historic moments e.g. JFK, Willy Brandt, Che Guevara, Fidel Castro...
- Put your face in a movie scene or poster
- Replace the face of a VIP or the people around him
